

Frescopa & Sustainability

At Frescopa, sustainability isn't a side project.

It's how we earn trust with every cup.

From the farms we partner with, to the machines we build, to the way our coffee houses operate day to day, we are committed to doing business responsibly and improving over time.

update to "Taste the difference of a truly responsible cup"

Our sustainability focus covers these core areas

Update the copy to be more engaging

Coffee and Tea Sourcing

Ethical, transparent, and farmer-first.

Great coffee and tea begin with the people and places that grow them. Frescopa is committed to responsible sourcing that supports farmers, protects ecosystems, and delivers consistent quality.

Long-term partnerships

We prioritise long-term supplier relationships wherever possible. Stable buying commitments help farmers invest in quality, their communities, and sustainable farming practices.

Responsible farming practices

We work with suppliers who can demonstrate responsible environmental and labour practices. These expectations are aligned with widely recognised industry standards focused on economic, social, and environmental responsibility.

Continuous improvement

Sustainability is a journey. Rather than claiming perfection, we focus on continuous improvement and learning from proven farmer-support and quality programs across the coffee and tea industry.

Transparency for customers

As Frescopa grows, we will continue to increase transparency around origin, seasonality, and sourcing practices so customers can make informed choices about what they drink.

Machine Manufacturing

Built to last. Designed to be maintained.

We believe the most sustainable machine is the one that doesn't need to be replaced. Frescopa coffee machines are designed with longevity and responsible manufacturing in mind.

Durability by design

Our machines are engineered for long-term use, with robust components and quality control processes that reduce premature failure.

Repairability and service

We design for maintenance, not disposal. Machines are built with serviceability in mind, using modular components and replaceable parts to extend product life.

Responsible materials and packaging

Where possible, we prioritise responsibly sourced materials and work with manufacturing partners who meet high environmental and ethical standards. We continually review packaging choices to reduce waste and environmental impact.

Stores and Coffee Houses

Lower impact, better experience.

Our coffee houses are where sustainability becomes tangible. From cups and cleaning to water, energy, and waste, we aim to reduce environmental impact while maintaining a great customer experience.

Reducing single-use waste

We encourage the use of reusable cups and in-store serve-ware wherever practical. We continue to improve takeaway packaging choices in line with local recycling and composting capabilities.
